PROJECT TITLE

Employee Performance Analysis using Excel

AGENDA

1. Problem Statement
2. Project Overview
3. End Users
4. Our Solution and Proposition
5. Dataset Description
6. Modelling Approach
7. Results and Discussion
8. Conclusion

PROBLEM STATEMENT

Develop and Excel based performance analysis to formal business report written by either a business leader or consultant to define and describe an issue an organisation is facing. Its goal is to propose a detailed method to solve the problem and recommend how those responsible can prevent it from reoccurring in the future. While these statements are native to the research field, they have become a prominent business resource. It is an effective communication tool that informs senior managers about a potential threat. In the long-run, the practice promotes innovation and technological advancement across the industry.

PROJECT OVERVIEW

The project focuses on analyzing employee performance data to enhance organizational effectiveness and decision-making. By consolidating data from HR systems, performance reviews, and attendance records into Excel, the objective is to identify performance trends, evaluate key metrics, and uncover actionable insights. The analysis will involve visualizing data to reveal patterns and correlations, such as productivity trends and performance disparities across departments.

WHO ARE THE END USERS?

- 
1. **Human Resources (HR) Managers:** They use the data for recruitment, performance management, employee development, and strategic planning.
 2. **Department Managers :**They utilize performance metrics to assess team effectiveness, manage resources, and identify training needs.
 3. **Senior leadership:** Executives and senior managers use the data to make strategic decisions, such as workforce planning and organizational development.
- 
- 

OUR SOLUTION AND ITS VALUE PROPOSITION

Filtering: Temporarily hide unwanted data. Use filter in excel to narrow down data in your excel spreadsheet.

Formula : Used to do mathematical calculations.

Graph: Charts and graphs are visual representation of worksheet data. These graphics help you understand the data in a worksheet by displaying patterns and trends that are difficult to see in the data.

Pivot table : Use to summarise, analysis, explore and present summary data.

Dataset Description

Employee Details: Names, Job titles, departments and employee Ids.

Performance Metrics : Productivity scores, quality ratings , attendance records, and goal achievement percentages.

Review Period : Dates or timeframes for performance evaluations.

Feedback : Qualitative comments from supervisors or peers.

Benchmarks: Targets performance levels or standards for comparison.

- EMPLOYEE DATA SET_KAGGLE
- 26 Features used 9 features
- Employee Id_numerical
- Last and first name_text
- Gender_male and female
- Employee rating_numbers

THE "WOW" IN OUR SOLUTION

Formula using in performance level of employee to measure and describe how precisely the variable within a dataset have been measured.

FORMULA

PERFORMANCE LEVEL=IFS(Z8>=5,"VERY HIGH",Z8>=3,"MED","TRUE","LOW")

MODELLING

Data collection: Input employee data such as performance metrics, attendance, and feedback into structured tables.

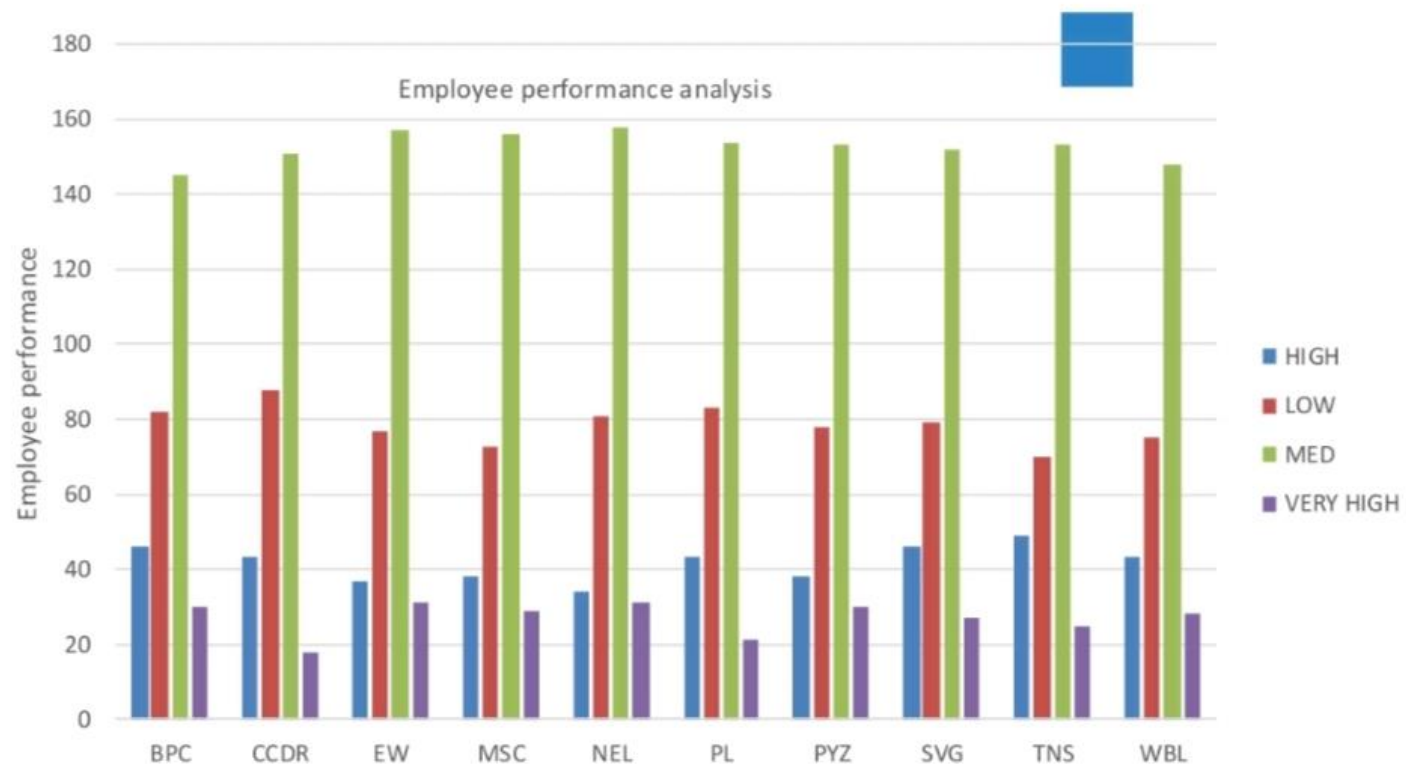

Metric Calculation: Use formulas to calculate key performance indicators (KPIs) such as average productivity, quality scores, and attendance rates.

Data Visualization: Create charts and graphs (e.g., bar charts, pie charts) to visually represent performance trends and comparisons.

Benchmarking: Establish benchmark and thresholds for performance evaluation to identify high and low performances.

Reporting: Generate summary reports that provide insights into performance and areas for improvement

RESULTS

conclusion

using Excel for employee performance analysis offers a structured approach to evaluating and improving staff efficiency. Excel's powerful data management and analysis capabilities enable organizations to track performance trends over time, identify both strengths and areas needing improvement, and set clear benchmarks and goals. By organizing performance metrics into comprehensive reports and visualizations, Excel facilitates data-driven decision-making regarding promotions, training, and resource allocation.
